

Longbow
ON TARGET FOR PRICE, PERFORMANCE & THE PLANET

Environment

With an estimated 100 million toner cartridges still being discarded into landfill around the world every year, we now need to think about what products we use & what happens to them after we dispose of them, more than ever before.

Longbow fulfils a fundamental requirement of the green agenda. Being both a remanufactured product, as well as recyclable, it helps XMA's customers to comply with the recent WEEE directive on toner cartridges with an electrical component (article 3) and reuse of components where possible.

Longbow toner cartridges use recycled parts where possible, offering a completely re-engineered and reworked product, often correcting many of the design flaws on the OEM product. As all non-critical components can be re-used, resources such as labour, energy, capital equipment are greatly reduced against producing the same cartridge from new.

XMA can offers a full cartridge recycling service for all toners – we can provide Cartridge Recycling Bins free of charge.

To start using the recycling scheme with Longbow product, all you need to do is to order free recycling bins from XMA alongside your normal order - then simply fill up the boxes with your used cartridges. When the boxes are full they can be collected direct from your premises free of charge.

-  **Choose a cleaner environment.**
-  **Choose a full, state of the art recycling process.**
-  **Choose a no quibble guarantee.**
-  **Choose a better value product than the OEM.**
-  **Choose Longbow.**
