value with a low running cost and
is ideal for producing marketing
materials in-house.

The **HP**
LASERJET P2055 SERIES.
Our **CURE** for **all**
your **PRINT** AILMENTS.

The **HP LaserJet P2055 series**
Our **PRESCRIPTION** solution
for your **PRINT COMPLAINTS**

A pain free way to minimise delays in GP surgeries, the HP LaserJet P2055 printer series is specifically designed to print NHS prescriptions straight out of the box. It's approved by EMIS, INPS and iSOFT as well, so it will fit into your existing IT systems without any problems at all.

Having an HP LaserJet printer close to hand from the world's most preferred printer brand* will reduce waiting times as well as speed up visits. So the HP LaserJet P2055 series will benefit both surgeries and their patients. And it's compact so it will take up minimal desk space, making it the perfect addition to any surgery.

As a healthcare provider, you know only too well what a difficult balancing act it can be, juggling quality care with patient safety, and all on a limited budget.

That's why HP could be an ideal partner for GP surgeries as we provide the kind of innovative IT solutions that can optimise and streamline printing output. We can help make your whole print and copy infrastructure much more efficient with facilities like Document Capture which allows you to scan and file sensitive data electronically so it can't be mislaid.

*Data based on IDC, Q3-2008 Hard Copy Peripheral Tracker Revision 2.

Of course, an HP printer is capable of a lot more than just printing prescriptions. As well as handling all the surgeries printing needs, our printers and MFP's also feature such cost-saving attributes as Instant-On Technology, so, when they're not in use, they shut down to save power. And spring back into action within a number of seconds when you need them.

Our recommendation then is that you take a look at the wide range of printers and MFPs we have on offer and see which best suit your needs.

HP LASERJET – The world's **MOST** preferred **PRINTER** brand.*
